

## Additional Activities commonly referred by chiropractors - please return to [bcainsurance@lloydwhyte.com](mailto:bcainsurance@lloydwhyte.com)

It is important that BCA Insurance Services assess whether your policy meets the demands and needs of your current business activities. Over the last few years, chiropractors have expanded their role and undertake additional activities adjunct to their chiropractic care. The following covers many of the common areas that members notify the insurer of. There is also scope to notify items not in this table so that the insurer can establish whether cover can be extended.

The following activities are acceptable, subject to suitable training and qualifications, as appropriate and notification to your insurer. You should be able to demonstrate competence and expertise as per GCC Code G3. Activities must be administered as an adjunct and to compliment chiropractic treatment, and not in isolation.

Acupuncture/Dry Needling		Low level lasers class 1-3	
Administering steroid injections		Manual lymphatic draining (if provided as part of chiropractic care)	
Alexander Technique		Naturopathy	
Animal Chiropractic excluding Bloodstock for Med Mal only		Pelvic floor examination external only and in connection with Chiropractic treatment
